

Sharon High School Structural Steel: Deliveries Start 03/17/21

Notice Date: March 16, 2021

Sharon High School Neighbors:

The Sharon High School project team would like to notify you that on 03/17/21 structural steel deliveries to the new Sharon High School project will begin. This is an exciting time in the project as the building will really begin to take shape over the coming months. Some new sights & sounds associated with this work over the coming weeks include:

- Crane is due onsite the week of March 22nd. The crane is a telescoping rubber tire crane that will move its way around the job throughout steel erection. We are planning on a single crane to erect the entire building.
- Structural Steel deliveries will arrive on standard open deck tractor trailers. They will be using both Gates A and B on Beach Street. Attached is a truck route we have shared with the delivery drivers which we feel is the best way into the jobsite.
- Structural Steel erection is scheduled to continue for approx. 12-13 weeks.
- Concrete deliveries and placements will continue as we begin placements on structural decks and slabs on grade
- Some slab placements may extend past 5 pm due to concrete set up time and concrete finishing

We'd like to take this opportunity to remind you to visit the Sharon High School Project website. The website also contains emergency/non-emergency contact information, meeting information, project documents, project flyovers, MSBA submittals, FAQs, images, and more.
