

Sharon High School: Rammed Aggregate Pier Notice
Installation Begins 11/6/2020

Sharon High School Neighbors:

Consigli Construction will be starting the rammed aggregate pier activity on 11/6/20 with some small test holes.

Once testing is completed, we plan to start production drilling Monday (11/9/20) afternoon/Tuesday morning.

Below the construction manager has outlined what you can expect to see/hear/feel. They have also included a very simple basic video of what the process is/how it works.

1. Working hours will be 7 am to 5 pm during this operation to maximize production. Truck traffic will obey the “black out times”.
2. Truck traffic will be 1-2 trucks making 4-5 trips per day (10 loads total) for the entire duration of the activity.
3. You will feel slight vibrations as the stone is compacted into the ground. Our subcontractor has solicited and taken surveys of all adjacent buildings/properties that fall within the “buffer zone”. Consigli has vibration monitors onsite in several locations to monitor the vibrations at our site perimeter to ensure they are within tolerance.
4. We will continue to use dust control measures throughout this activity.
